## Two Makers of Canada

SIR WILLIAM VAN HORNE

LORD STRATHCONA

Among the Canadian books that have come to be recognized as standard works a high place is taken by the series known as "The Makers of Canada." They were first published by George J. Morang, of Toronto, in 1904, and comprised twenty volumes covering Canadian history from Champlain to Macdonald and from the Atlantic to the Pacific. Each period and historical figure discussed was dealt with by a scholar and writer particularly conversant with his subject, the result being to gather into the confined space of a few volumes a comprehensive view of Canadian history.

With the more than twenty years that have passed since this series was first published there has taken place a vast amount of research and discovery in the history of this country, and episodes and characters of past days are now much more clearly seen than they previously were. Thus the Oxford Press of Toronto, into whose possession the plates of these books have passed, very wisely decided to issue a new and revised edition of the series. This has been produced under the able editorship of W. L. Grant, M.A., LL.D., who has succeeded in greatly adding to the historical value of the work. Each volume has been carefully gone over and revised, and in some cases whole books have been re-written in the light of newly discovered facts.

Perhaps the most important improvement in the series is the addition of a volume on the lives and work of Lord Strathcona and Sir William Van Horne. It was obviously imperative that Western Canada should receive more attention than was possible when the series first appeared, and no better way of doing it could be devised than in presenting a faithful account of the life work of the two men who, more than anyone else, had to do with the foundation of the Canadian West. In John McNaughton's life of Strathcona and Walter Vaughan's life of Van Horne were the ideal books for the purpose. They are of themselves, a rich storehouse of information concerning the founding and building of the West. The dynamic force of Van Horne built the Canadian Pacific, the railroad that made Confederation an actual fact. His work was and still is an epic of Canadian history and he, like Strathcona, rightly belongs to that company of giants who may properly be termed "Makers of Canada."

### Father Boltz Delights Audience With Wonderful Recital

It is not often the lot of a small prairie town to have the opportunity to hear such a recital as was given in Oyen Theatre last Friday by Father Boltz, and it was most unfortunate that the three day storm of the fore part of last week, left the roads in so bad a condition that it was practically impossible for country residents to attend. A special concert grand piano (kindly loaned by Heintzman & Co., Calgary) did not arrive on the day scheduled, and the recital was postponed till the following evening. This, however did not effect the size of the audience, as the towns people turned out in force, and thoroughly enjoyed a truly magnificent program.

It is difficult to single out for special mention any of the seventeen numbers played. Each was rendered with amazing skill. In making a selection, we would pick Beethoven's "Für Elise" to the piano, Chopin's "Military Polonaise," "The Erl-King" (Schubert), Liszt's "The Bubbling Spring" (Rive-King) and the "Grand Rhapsodie" (Father Boltz). Another number, profoundly impressive, was "Death" (Tchaikovsky).

At the conclusion of the recital Father Boltz was given a great ovation.

It is hoped that at some future date Father Boltz will be able to pay another visit to Oyen, when he may be sure of a very warm welcome, and with roads favorable to travel, a crowded house.

Mr. and Mrs. Nelson Evans and son, who have been spending the winter months visiting in the old country, returned to Oyen last Saturday.

### District Builders Luncheon

The regular monthly luncheon of the Oyen District Builders Association was held in the Alberta Hotel, last Saturday at 12:30 p.m., when a record attendance was present.

Mr. E. C. Hallman, gave a most interesting talk on "Farm Problems", in which he dealt chiefly with soil drifting, tumbling weeds, overhead charges and power. Mr. Hallman pointed out that it was a recognized fact that it took about 40 years to finally settle down to a definite system of farming, that could be considered best for any particular district. With this thought in mind and realizing that farmers in this district are still in the experimental stage, he thought that the idea of such an association, where ideas on the many phases of farming could be interchanged, was a fine thing.

The matter of power and overhead was largely an individual problem, according to a man's ability with horses or as a mechanic although the latter be them, overhead, could easily be kept down by the aid of a well sheltered kitchen garden, a few good cows, and chickens.

Mr. Hallman believes that the tumbling weed problem can be solved by planting Caragana hedges around the field. (Ed. note: Mr. Hallman has been experimenting along this line, and has the making of some very fine hedges, which, when slightly taller, will materially assist in combating the menace of tumbling weeds). Every farmer, he thought, should spend some time growing trees.

In the matter of soil drifting, the exchange of ideas of farmers should prove most beneficial and many individual problems will no doubt be solved in (Continued on page 2.)

# Program of Construction Work In Saskatchewan Proposed By The Canadian National Railway

The programme of construction work on the Canadian National Railway in Saskatchewan is to be completed by August, 1929, and now having the consideration of Parliament, comprises the following lines:

Weyburn to Radville, 22 miles.—Two objects, the railway management states, would be attained by the construction of this line: first, relief would be given to the farmers along its route in respect to their wagon haul to market; and second, the communities Radville, Bougham, and Willowbush, would be brought into more direct rail communication with the distributing centre of Weyburn, their rail distance to Weyburn being reduced by 122 miles. The route to Moose Jaw would be 14 miles shorter and to Radville 28 miles shorter. The line would run through a well settled grain-growing district and ease in which mixed farming is increasing. The route has been the farmers to market at present requires 15 miles in the centre of the area, and the farmers are looking forward to the development of dairying if their road haul is reduced.

Willowbush North-Westerly, 22 miles.—This is a development and

colonization branch in the mid-eastern part of the province. The purpose of the line is to give better railway communication to the district north-west of Willowbush, lying between the Yorkton branch of the C.N.R. and the main line of the Grand Trunk Pacific. Eventually it is planned to extend this line through the unoccupied area between the C.N.R. and the main line of the Grand Trunk Pacific. Eventually it is planned to extend this line through the unoccupied area between the C.N.R. and the main line of the Grand Trunk Pacific.

Sturgis to near Peeseno, 100 miles.—This line in the north eastern part of the province would open up a large area of good agricultural land and give railway transportation to the Soldiers' Settlement south of Peeseno. It would provide a shorter and better through route for traffic from the Melfort and Prince Albert districts to Winnipeg and the head of the lake. There is ample provision for crop raising and mixed farming in the area. The proposed new railways would also form part of a link between Hudson Bay Junction and the lines of the Canadian National in Southern Saskatchewan.

Peeseno, Northern, 12 miles.—The purpose of this line is to open up and give rail communication to an important section of the Carrot River country. The territory on both sides of the Carrot River, as far east as Bougham, is a very good character of soil and is now being cleared off. This one of the best grain growing districts in the West, having some rainfall each year. There is considerably settlement, and this will be greatly encouraged by better railway facilities.

Shellbrook (or near Parkdale), Western, 22 miles.—For a considerable time the people living in the district to be traversed by the proposed line have been in need of railway facilities. There already is good settlement and development, these being a high proportion of excellent agricultural land for grain, growing and mixed farming. This branch which, in the opinion of the Railway, would be justified by the outlet for the cattle and sheep of the settlers and the wagon haul of the settlers and the

## Leaves To Supervise Operations At Bay

Government Engineer Will Get Party Settled Into Work of Deciding on Best Port

Russell Vull, Ottawa, Canadian government engineer, has gone to Hudson Bay, where a party will spend the coming winter investigating the merits of Churchill as a port, but will not himself remain there that length of time. The party had already gone ahead, and he was making his trip to see it get settled into its work. Twelve or fourteen men have gone north. They and their equipment were transported from the end of a sled to Churchill by aeroplane, and they will remain at the bay until fall. Mr. Vull declines to make any comment on his three years at Nelson, to draw any comparisons between Nelson and Churchill, or to remark on the advantage of either port or on the feasibility of the Hudson Bay route or the, or the things that would have to be taken into consideration at Churchill. He said materials were perhaps the most important. They had never been investigated. The mileage of the railway from the point and the cost of construction were other matters to be considered. Of Nelson Mr. Vull would say one thing—the work done there was in good shape. When it was under way there was no thought that it would be left to you and me to complete. It had been made to meet such conditions. It had not been intended for permanence—it was to have been supplemented as time went on—but it stood today in splendid condition.

## Something New For Berlin

First Ice Cream Soda Fountain Makes Big Hit

The American soda fountain at last has obtained a foothold in Berlin. Refreshment of almost every other sort in the world has been long obtainable here, but not until recently has it been possible to buy an ice cream soda. There is now a full-fledged fountain, with complete signs on the windows reading "Soda Fountain—Ice Cream."

Curiously, the neighborhood selected to establish one of the least frequented by Americans of any of the central districts. It is directly opposite the railway terminal which carries passengers from Southern Germany. The arrivals from the home of good Bavarian beer take very kindly to American beverages, especially the soda, which region. Yet the Canadian grower has not asked his government to finance his operations.

## Flays Study of Evolution

Should Not Be Taught in Canada's Schools Says Winnipeg Lawyer

Declaring that evolution is a question of outstanding importance for the consideration of the federal and provincial governments of Canada, R. A. Denner, K.C., eminent counsel of the subject from the public school system, flayed a study of evolution. "If all the people of Canada were atheists we would be a nation of infidels," he added. "Why people take them were descended from monkeys I cannot understand. They are quite welcome to insult their ancestors in this manner, but I am sure none were not monkeys."

Army Party Invitations Issued

Formal invitations for the three-power conference in Rome to be held at Geneva at as early a date after June 1 as is convenient have been handed by the United States government to the British and Japanese ambassadors. The text of the formal invitation is understood not to contain any fixed formulae to guide the Geneva negotiations.

An efficient Japanese soldier may be familiar with 4,000 Japanese characters used in the language.

Lord Ring of Viny will soon have the estate, Thorpe Hall, Essex, England, stocked with wild ducks from the Canadian prairies. Having expressed a desire to stock his estate with the graceful game of the north, he has graciously accepted a gift of twenty-five wild ducks from the Prairie Express yards. The ducks seemed to

## Girl's Jest Starts Apple Industry

And This Year the American Northwest Will Celebrate Centennial of Founding of Business

Blaine, just one hundred years ago, a pretty English girl would have her little joke, the centenary of the American Northwest's apple industry is to be celebrated at Coquille, Wash., this spring. From that apple the Northwest has built an apple industry in the springing of millions of boxes each year.

In the spring of 1928 Captain Emiliano Simpson, a Hudson's Bay Company "shipper," was given a banquet in London. Beside him sat a pretty girl, Mary Leigh. The captain told her of the American wilderness. Mary Leigh bit into a red apple and, gathering the pips, presented them to the captain, with the laughing suggestion that he need not lack fruit in the wilderness.

Simpson slipped the pips into his breast coat pocket. Eighty months later the arrival of Fort Vancouver. The pips were carefully planted in a box. All winter the box was placed in a chamber heated by a stove. In the spring the plants were transplanted to a sheltered north window.

In three or four years one tiny group of seedlings appeared. It was the first seen in Western America, Indian chiefs and white traders and trappers came in and, with excitement, the small apple was divided among them.

From that romantic start grew the Northwest apple industry.

## Is Canadian Better Farmer?

Washington Paper Refers To Their Successful Competition With American Agriculturist

In the Canadian a better farmer than his fellow-agriculturist on the United States side of the boundary? The Washington Post asks this question in regard to the passage through Congress of the Farm Relief Bill, which the President has vetoed. The newspaper finds it "difficult to understand how the Canadian wheat farmer can compete with his American cousin in the wheat market on this side of the line against the great 30-cent-per-bushel." Yet the Canadian farmer does compete in this market, the Post says, and quotes official records of imports of wheat for milling, re-export, and domestic use.

## Scientist Has New Theory

Important Pronouncement on Origin of Man is Looked For

Sir Arthur Keith, world famous anthropologist, is preparing a Canada for delivery before the Royal Anthropological Institute, which is held at about certain to constitute the most important pronouncement on the origin and development of man since Darwin pronounced his theory of descent.

Scientists are expecting just a slight modification of the Darwinian theory, which would emphasize man's own animal and human qualities, contradicting the old theory of man's straight descent along one branch from animals.

## Will Serve India First

India will be the first destination of the empire's airship service and the two new super-dreadnoughts of the air are to be in commission for the eastern route. The Canadian flight instructor is expected to materialize here for some considerable time, eighteen months at least.

# Canadian Scientists Investigate Theory That This Continent Is Drifting Towards West

## Used As An Alibi

Soviet Russia Places Responsibility for Propaganda on Third Internationale

Soviet Russia has a good alibi in the Third Internationale. The Third Internationale spreads all the literature and does all the propagandizing. When somebody complains Soviet Russia replies: "Why, that's just a political party, like the Democrats in America or the Conservatives in England."

It sounds all right until one dips into the facts. There are two parties in America and three or four in England, but only one in Russia.

So far as Soviet Russia is concerned, it knows but one political system, and telebrates but one faction, both of which are represented by the Third Internationale. Until it frees itself from that alibi it will have to assume responsibility for what the Third Internationale commences at by way of stirring up trouble in other continents.

## Winnipeg Newspaper Union

A Smart Daytime Dress for the Junior Miss

A striking effect is achieved by the use of two materials in making this smart and practical dress as in View A. The skirt has inverted plaid at front and back and is joined in a yoke. There is a convertible collar, long tight fitting sleeves with cuffs, patch pockets and a trim belt. View B is the same dress made of one material, having the cuffs on the short sleeves and edge of the yoke turned in. No. 1529 is in sizes 8, 10, 12 and 14. Price 10 yards 100 cents. 2 1/2 yards 25 cents. View A requires 2 1/2 yards 25 cents. View B requires 2 1/2 yards 25 cents. The design illustrated in our new Fashion Book are advance styles for the home dressmaker, and the ever dependable for taste, simplicity and economy will find her desires fulfilled in our patterns. Price of the book 10 cents the copy.

## The first stage of an investigation into a theory that the American land is drifting westward has been completed.

Canadian and 25 other countries participated in the scientific effort to prove the theory first laid out by Wegener, an Australian geophysicist.

Briefly, the theory is that in the progress of the ages the American land has been gradually drifting westward. It is claimed that evidence of a coast range of mountains extending throughout the whole length of the continent is simply the effect of buckling or crumpling at the forward edge due to this drift. The present rate of the drift is estimated at one inch a year.

Through an international arrangement 50 stations distributed in 29 countries were selected to make observations not by astronomical observations, coupled with radio line signals. The relative longitude of these stations having been determined, it will be possible by a repetition of the observations at some future date definitely to find the question of continental drift.

Canada took part in the investigation by occupying two stations, one at Ottawa and the other at Vancouver. At each station two theodolites were constantly in use, as well as auxiliary equipment of alidade, chronometer and wireless instrument. At Ottawa astronomical observations were obtained on 23 nights, and at Vancouver on 25. At each place wire loss time signals from five different reading stations were received and measured at all hours of the day and night, the total number of distinct signals amounting to over 7,500. Observations to determine the relative positions of the stations of the four observers engaged were made at the Dominion Observatory, Ottawa, both before and after the main series of observations.

Other investigations have established many favorable points in connection with the investigation of drift. It has been determined that the substratum underlying the surface crust of the earth is not absolutely rigid but is susceptible, under the action of long continued stresses, to gradual deformation. This continents may be considered as floating on a substratum which, when considered over long periods of time, acts like a semi-rigid body. It has also been shown that at one time there was a much closer association between the forms of plants and animals in North America and Europe and Africa.

## Improved Table Cora

Three Varieties of Sweet Cora Suitable for Western Cultivation

Three varieties of sweet corn, Pickaway, and Golden Wonder, and Golden Wonder, by the Horticultural Division of the Experimental Farms, give good promise, particularly for the corn belt. The Golden Wonder is particularly rather dwarf in habit, bearing its ears close to the ground. When ready for use the berries are white but a light yellow, almost a cream, moderately deep, very tender and extremely sweet. As the corn matures the berries change to a purplish black, in which condition they are still tender and sweet. Banting, also dwarf in habit, was produced from a cross between Pickaway and Golden Wonder. Its habit of growth is much like the Golden Wonder. The kernels when ready for cooking have an attractive golden-yellow color, brown, moderately deep, quite sweet and tender. Early Mammoth grows to a height of about five and a half feet, bears medium to large ears usually bearing twelve rows of kernels, which are very tender and sweet. Being a very desirable table corn. The report of the Dominion Horticulturist for 1925 shows illustrations of the cobs of these varieties in full size.

## Soviet Purchases in Canada

Louis Klon, trade delegate of the Union of Soviet Socialist Republics, Saturday confirmed the report that an order for 110,000 worth of blouses and sweaters had been placed by Russia in Canada. Mr. Klon stated that large purchases of other goods were being made in the country.

Possession of an umbrella is regarded by the natives of French West Africa as a mark of distinction. Hence the native workmen save money to purchase one or more umbrellas.

The cow is a factory or manufacturing plant in Manitoba, and has been kept for some time in the city park 7 days a week, and turns out a product that is good for man or beast.

"Porter, fifty cents for another pitcher of tea water."

"Sorry sub, but if it takes any more ice, that corpse in the baggage car ain't goin' to keep."

"Hiram," expostulated Mrs. Cornsattel, "the way you stare at the limbs of those shameless city busses, is something scandalous. One would think you'd never seen legs afore."

"Well," drawled Mr. Cornsattel, "that's just what I was beginnin' to think myself, Maria."

## LEGAL NOTICE

### MORTGAGE SALE OF FARM PROPERTY

Pursuant to the directions of the Registrar and in virtue of the Powers of Sale provided by "The Land Titles Act" under a certain mortgage which will be produced at the time of the sale, there will be offered for sale by public auction at the Post Office in the Village of Oyen in the Province of Alberta on Saturday the 2nd day of April 1927, at the hour of Two o'clock in the afternoon, the following property, namely:

Section Eighteen (18) in Township Twenty-nine (29) and Range Four (4) West of the Fourth Meridian in Alberta, reserving to the Crown all mines and minerals. Terms of sale to be Twenty per cent cash at the time of the sale and the balance according to the terms and conditions to be made known at the time of the sale or upon application to the vendor's solicitors.

The above property will be offered for sale subject to a sealed reserve bid and all encumbrances, save taxes for the current year. The vendor is informed that the above property is situated about 8 miles from Excel on the C.N.R., and that there are situated there a dwelling house 14 ft. by 18 ft., with addition 12 ft. by 10 ft., a stable 20 ft. by 21 ft., a granary, a chicken house and a shop, 6 miles of fencing and a well, that about 500 acres are under cultivation.

For further particulars and conditions of sale, apply to Thomas Lees, Oyen, Alberta.

DATED this 21st day of February A.D. 1927.

Approved W. Forbes, Registrar.
